DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 5-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kubota, et al (6,333,515) in view of Kreuzer (5,901,976).

Kubota, et al a lining for columns of automobiles comprising a base area 62; an opening area covering an airbag 48 and a hinge area 64 contacting the base area. The base area and the opening area together with the hinge area are covered by a unified decorative layer. The base area has a fixing element 68, as shown in figure 5. Kubota, et al teaches the claimed elements except for the type of material used for the lining. Kreuzer teaches an airbag lid comprising an opening area having a thermoplastic material with a Shore A hardness greater than 100 and a hinge area 8 adjoining a base area 3 and consisting of a thermoplastic material with a Shore A hardness of less than 95 (see claims 10-12). The opening area is bonded by intended fracture lines or wall thickness reductions adjoining the hinge area 8. The hinge area 8 consist of a thermoplastic material with a Shore A hardness between 30 and 95 (see claim 12). The hinge area consist of a thermoplastic material with a Shore A hardness between 60 and 80 (see claim 12). The base area and the opening area together with the hinge area are covered by a unified decorative layer, as shown in figure 1. Based on the teachings of

Kreuzer, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the lining of Kubota, et al to use the disclosed materials to provide a hard layer to prevent breakage as well as a sort layer to prevent injuries, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice.

Response to Arguments

3. Applicant's arguments with respect to claims 5-17 have been considered but are moot in view of the new ground(s) of rejection.
